

## ABOUT

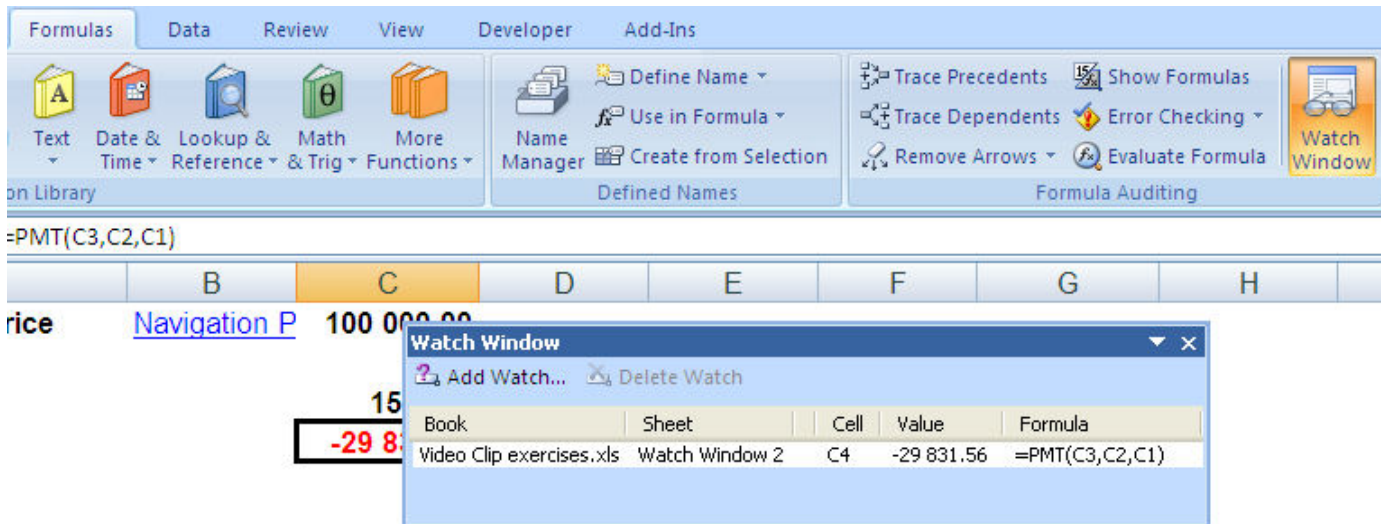

[www.AuditExcel.co.za](http://www.AuditExcel.co.za) provides assistance with all things related to Excel spreadsheets.

## Useful Tools

***Use the watch window to monitor what is happening in other areas of your spreadsheet***

(For Excel 2003 use TOOLS/ FORMULA AUDITING/ SHOW WATCH WINDOW or find it on the FORMULA AUDITING TOOLBAR. Watch a video clip on using this tool at [www.AuditExcel.co.za](http://www.AuditExcel.co.za))

The watch window allows you to monitor what is happening in certain cells in the spreadsheet no matter where you are. It can be found next to the Auditing Toolbar under the Formulas tab. When you click on it, a separate dialogue box will appear. You can now click on any cell/s and click 'Add Watch' and it will be added to the list.

As you work through your spreadsheet and make changes to the inputs, this dialogue box will remain in view and you will see what impact your changes are having on the key cells. Great for setting budgets and forecasts!
